

### Office visits see a dip in August

**4.5**

The number of times per month the average employee comes into the office.

**10%**

Percentage of people coming in 3-4 times a week (a drop from 16% in April).

**19%**

### August Bounce Rate

Employee bounce rate in the U.S. continues to climb, up 1.5% from July.

The average U.S. office had a **4% increase** in the number of employees returning.

% increase in employees returning to the office by city:

#### SAN FRANCISCO

Saw a drop in employee's returning to the office, seems to be driven by drop in tech sector (IT) returns.

#### LOS ANGELES

Still seeing RTO growth; interestingly, tech seems to be the big driver.

#### NEW YORK

Saw a drop in employee's returning to the office which also seems to be driven by drop in tech sector returns.

#### BOSTON

Remained roughly the same from July to August. Drops in sectors like Non-profit and Wholesale seem to be offset by Healthcare and Professional Services.

Industries that saw more employees returning:

- Retail \*
- Media/Telecom
- Government

\* Retail especially had a big push in returns in August.

Industries that saw big dips:

- Education
- Construction

Both were big players in previous month's returns.

#### GLOBAL

**In August, AU office capacity dropped to 10%**

Desk bookings and employees in the office both dropped.

Very few countries saw in-office employees per company rise from July to August. Countries that saw top growth include Netherlands and Canada.

Conference room booking also saw a drop in August. This matches with historic trends as conference room booking usually sees a dip that rebounds in September.
